ENVIRONMENTAL DATASHEET

PRODUCT COMPOSITION

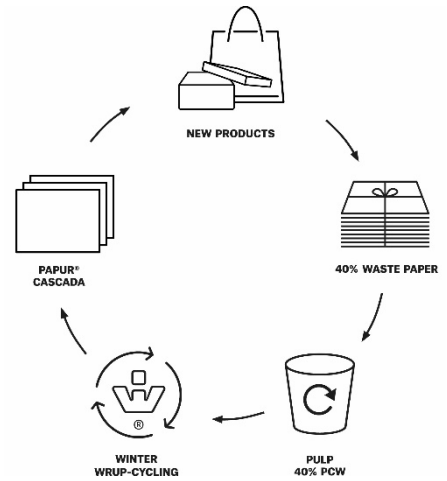

WINTER WRUP-CYCLING

The use of recycled paper is an effective way to reduce the environmental impact. The recycling produces lower emissions and consumes less energy, chemical and water than the production of virgin fibres.

In search of innovative products, we have developed a unique visual cover material that, due to the high percentage of recycled fibres, has significantly reduced the usage of virgin fibres.

PAPUR® CASCADA consists of 40% recycled PCW (post-consumer waste) fibres. Because of the recycled content, PAPUR® CASCADA contributes to a circular economy.

POST CONSUMER WASTE

Saves trees, water, energy and greenhouse emissions.

Poste consumer material is defined as waste paper, such as office paper and newspaper that has served its intended purpose and has been separated from solid waste to be recycled into new paper. The greater the percentage of poste consumer material in the paper, the less resource intensive it is, because it is closer to “closed-loop” recycling.

FSC™

The mission of the Forest Stewardship Council is to promote and enhance well-managed forests through credible certification that is environmentally responsible, socially acceptable, and economically viable.

The mark of responsible forestry

REACH

Registration, Evaluation, Authorisation and Restriction of Chemicals is a European Union regulation dating from 18 December 2006. REACH addresses the production and use of chemical substances, and their potential impacts on both human health and the environment.

<p>RECYCLABLE</p> <p>The recycling of paper is the process by which waste paper is turned into a new paper product. It has a number of important benefits: It saves waste paper from occupying homes of people and producing methane as it breaks down. Because paper fibres contain carbon (originally absorbed by the tree from which it is produced), recycling keeps the carbon locked up for longer and out of the atmosphere.</p>	
<p>VEGAN</p> <p>Veganism is the practice of abstaining from the use of animal products, particularly in diet, and an associated philosophy that rejects the commodity status of animals. A follower of the diet or the philosophy is known as a vegan.</p>	
<p>UN GLOBAL COMPACT</p> <p>The UN Global Compact is the world's largest corporate sustainability (a.k.a. corporate social responsibility) initiative with 13000 corporate participants and other stakeholders over 170 countries with two objectives: "Mainstream the ten principles in business activities around the world" and "Catalyse actions in support of broader UN goals, such as the Millenium Development Goals (MDGs) and Sustainable Development Goals (SDG's). Moving forward, the UN Global Compact and its signatories are deeply invested and enthusiastic about supporting work towards the SDGs.</p>
