ENVIRONMENTAL DATASHEET

PRODUCT COMPOSITION

WINTER WRUP-CYCLING

WINTER WRUP-CYCLING revives recycled materials into high-quality coverings. The use of recycled paper is an effective way to reduce the environmental impact. Recycling produces lower emissions and consumes less energy, chemical and water than the production of virgin fibres.

In search of innovative products, we have developed a unique visual cover material that, due to the high percentage of recycled fibres, has significantly reduced the usage of virgin fibres.

WELINO FELT consists of 40% recycled PCW (post-consumer waste) fibres. Because of the recycled content, WELINO FELT contributes to a circular economy.

POST CONSUMER WASTE

The use of post-consumer waste saves trees, water, energy and greenhouse emissions.

Post-consumer material is defined as waste paper, such as office paper and newspaper that has served its intended purpose and has been separated from solid waste to be recycled into new paper. The greater the percentage of post-consumer material in the paper, the less resource intensive it is, because it is closer to “closed-loop” recycling.

FSC™ (FOREST STEWARDSHIP COUNCIL)

The mission of the Forest Stewardship Council is to promote and enhance well-managed through credible certification that is environmentally responsible, socially acceptable and economically viable.

The mark of responsible forestry

REACH

Registration, Evaluation, Authorisation and Restriction of Chemicals is a European Union regulation dating from 18 December 2006. REACH addresses the production and use of chemical substances, and their potential impacts on both human health and the environment.

RECYCLABLE

The recycling of paper is the process by which waste paper is turned into a new paper product. It has a number of important benefits: It saves waste paper from occupying homes of people and producing methane as it breaks down. Because paper fibres contain carbon (originally absorbed by the tree from which it is produced), recycling keeps the carbon locked up for longer and out of the atmosphere.

VEGAN

Vegan means that this material does not contain any animal products or animal-derived ingredients.

UN GLOBAL COMPACT

The UN Global Compact is the world's largest corporate sustainability (a.k.a. corporate social responsibility) initiative with 13000 corporate participants and other stakeholders over 170 countries with two objectives: "Mainstream the ten principles in business activities around the world" and "Catalyse actions in support of broader UN goals, such as the Millenium Development Goals (MDGs) and Sustainable Development Goals (SDG's). Moving forward, the UN Global Compact and its signatories are deeply invested and enthusiastic about supporting work towards the SDGs.
